## Homework 5

1. For the following autonomous ODEs, find the equilibriums, sketch a few trajectories of the solution and determine the stability.

$$
\begin{aligned}
& \text { (a) } y^{\prime}=2 y-6 \\
& \text { (b) } y^{\prime}=10-5 y \\
& \text { (c) } y^{\prime}=y\left(y^{2}-4\right) \\
& \text { (d) } y^{\prime}=y^{2}\left(9-y^{2}\right)
\end{aligned}
$$

2. Given the graph of $f(y)$ versus $y$, find the equilibriums of the ODE $y^{\prime}=f(y)$, draw the phase line and determine the stability.
