Past Courses Taught:

Calculus: 1982-1983 (Penn), 1983-1990 (Drexel), 1990-2000 (Temple): Number of students ranging from 12 (Honours) to 250 (large lecture). Whenever there is a common final, my sections, score, on the average, between 10 to 20 points (out of 100) higher than the average section. I was the only professor at Penn (1982-1983) who made it to the list of “best teachers” in all his four courses.

Other Past Undergraduate Courses: Linear Algebra, Differential Equations, Mathematical Programming, Computer Algebra, Problem-Solving.

Past Graduate Courses: Computer Algebra and Experimental Mathematics (1990, 1992, 1994, 1996, 1998, 1999, 2001-2005). Combinatorics (1991, 1993, 1995, 1997, 2000, 2001, 2003). Famous Open Problems (1999).

Multivariate Calculus (Fall 2001) Experimental Mathematics (Fall 2001), Probability (Spring 2002), Advanced Calculus for Engineering (Fall 2002), Combinatorics I and II (Fall 2002 and Spring 2003 respectively). Calculus I (Fall 2003, Fall 2004), Graph Theory (Fall 2003). Calculus II (Fall 2005).

Current Courses Taught: Math152 (Calculus II, two big lectures), Marh 640: Experimental Mathematics (Spring 2005, grad course).

Software Development

My website <http://www.math.rutgers.edu/~zeilberg/> has many computer-algebra packages available free of charge. They are used not only by mathematicians, but also by scientists, especially physicists, computer-scientists, and engineers, who need combinatorial sums and special functions on a regular basis. My algorithms are now part of Maple (the packages `sumtools` and `SumTools`), and soon will also be part of Mathematica.

Curriculum Development

An innovative grad course in Experimental Math is currently under development. It is now an official course Math 640.

I also prepare lucid and detailed handouts for both Calculus I and Calculus II (for every section covered), freely available from my website. This should be useful to all Calculus students at Rutgers and elsewhere.

Seminar Organizer

With Drew Sills, I am co-organizing a very successful and innovative seminar on Experimental Mathematics. Speakers include such celebrities as John Nash, Freeman Dyson, George Andrews, Greg Chaitin, Tom Hales, and Jon Borwein, as well as many local talents. The attendance is very good, and it gives the department great visibility, as well as offering accessible and intriguing talks to faculty and graduate students.
